

Environmental technology from Baden-Württemberg

Innovative. Professional. International.

That is what we stand for. **S**ince our foundation in the mid-1990s by the Ministry of Economic Affairs of Baden-Württemberg in order to make environmental technology known in more difficult foreign markets, much has changed in this area. However, one thing is not certain – our inspiration, our capable partners with their motivated employees and our extensive expertise, which resulted from the close cooperation of PU with Baden-Württemberg International. From the very beginning, we have been committed to sharing our knowledge in the field of resources and energy efficiency – through catalogue exhibitions, trade fairs and workshops. With success: Originally 100% funded by the Ministry of Economic Affairs of Baden-Württemberg, the PU was already able to finance itself in 2006. Today, as Plattform Umwelttechnik e.V., we not only represent the interests and services of our members, but also actively promote cooperation in areas such as research & development or engineering services. Whether air, water, contaminated sites or recycling – you can rely on our strengths.

Achieving more together – an association of experts

Our network is an association of experts from the most diverse areas of environmental technology: such as companies of all sizes with a focus on environmental and energy technology, craft businesses that consciously use environmental technology, universities and research institutes that actively research and further develop the field of environmental technology, service providers that have concentrated on offering consulting services in the environmental sector, or institutions and organizations in Baden-Württemberg that deal intensively with the topic of environmental technology. The diversity of our network is not only evident in the various areas, but also in the expertise of our members. Air, water, renewable energies, industrial environmental technology or energy efficiency – we are the high-performance network for the environment. You can profit from our knowledge!

With our extensive network we open up new opportunities for our members to successfully export environmental technology from Baden-Württemberg. With our regional, national and international partners, we not only facilitate access to new business partners and interesting customers, but also to new products, cross-market business ideas or new technologies as well as the acquisition of new knowledge – and the inspiration of others at network events where participants or speakers are involved, or the establishment of new contacts within the environmental technology industry – in our events, seminars, conferences and workshops.

We offer a broad platform both for the search for partners for cooperation projects and for information on current developments in environmental technology.
